

GORDA - IST FP6 004758

Resubmission of Deliverable D4.6 - Note to the reviewers (to be included in the formal response to the 3rd period review report)

The current version of Deliverable D4.6 is version 1.1 and addresses the critics and suggestions made in the 3rd review report of the project.

3rd review report: "It is not clear which replication protocols are currently implemented by Sequoia (Section 3.2.2)."

Section 3.2.2 of the report has been changed with the following sentence: "Our current prototype has bindings for PostgreSQL and MySQL, but the code to provide the triggers is extremely simple as it only logs information on updated tuples and soon we will have binds to different database systems. Nevertheless, for these two DBMS bindings it is possible to use any of the GORDA implementations of the protocols in deliverables D3.3 - Replication modules reference implementation." addressing the reviewers question.
